

SitaWare Insight

Gain an operational advantage through AI-supported decision-making

Gain an advantage through AI-supported decision-making

SitaWare Insight offers advanced decision support based on data collection, storage, and analysis.

Benefit from a fully integrated solution

Staff operating across intelligence, planning, and current ops roles gain an advanced and holistic overview of the battlefield with SitaWare Insight.

Ensure a future-proof setup

The underlying cloud-native architecture of SitaWare Insight ensures a scalable, future-proof solution with a strong security concept.

Manage the full intelligence cycle

SitaWare Insight provides complete management of the Intelligence Requirement Management & Collection Management (IRM & CM) process.

Enable cross-coalition information sharing

Complying with NATO FMN requirements, SitaWare Insight delivers effortless cross-coalition communication and information sharing.

Protect sensitive information

By defining specific user groups, SitaWare Insight allows you to manage data access within the system and control external dissemination of information.

SitaWare Insight – advanced data-driven decision support

SitaWare Insight is the decision support tool that transforms data collection and management and provides commanders with advanced storage, compute and analytic capabilities.

A fully integrated intelligence solution

SitaWare Insight integrates seamlessly with the successful SitaWare Headquarters C4I system, which is in operation with more than 45 customers worldwide. SitaWare Insight enhances the users' intelligence requirements management (IRM) and collection management (CM) capabilities, making it easy to store and retrieve information from multiple sources.

SitaWare Insight exploits the 'data lakes' that militaries control, formed from sensor information, images, videos, documents and more. Based on this, the solution provides a secure, cloud-based information repository and an AI-powered search function that allows users to pinpoint data on everything from enemy positions to images, documents, and equipment.

Incorporating intelligence to provide insights

SitaWare Insight provides commanders with a Recognised Intelligence Picture, timely intelligence support, and data insights to support planning and ongoing operations as well as intelligence preparation of the battlefield and the operational environment.

The solution integrates relevant military and non-military data sources, supporting staff in intelligence, planning and operational roles from the battalion to strategic levels.

SitaWare Insight is further enhanced through advanced image and object recognition technology. As such, it can be trained to identify different military objects like vehicles or equipment, tagging these with the appropriate metadata and storing them in the 'data lake' for future access.

Operational planners are fully dependant on information from the intelligence community. We have built a multi-domain tool that can integrate all these activities. With SitaWare Insight, there is no limitation.

Henrik Sommer

SitaWare Insight Product Manager and Domain Expert
Systematic Defence

A scalable and future-proof intelligence solution

SitaWare Insight offers a scalable, future-proof solution through its underlying cloud-native architecture, which ensures security and the correct handling and management of data. It enables users to share data on a need-to-know basis and at different classification levels, defining specific user groups to manage access.

SitaWare Insight complies with both NATO and Federated Mission Networking (FMN) requirements, including Coalition Shared Data (CSD), delivering effortless cross-coalition interoperability and information sharing.

In short, SitaWare Insight is a significant enabler for the intelligence branch, operational planners, and the soldier on the ground, providing them with a holistic view of the battlefield.
