

IRIS Forms

Simplify the exchange of mission-critical information with formatted military messaging

Enable multi-domain interoperability

By standardising and formatting orders, reports, and messages, IRIS Forms allows you to communicate across domains and with coalition partners.

Benefit from full integration with the SitaWare suite

IRIS Forms integrates seamlessly with the SitaWare suite, strengthening interoperability and optimising communication and workflows across the battlefield.

Save time and manpower with automated processes

As you fill in the automatically generated message forms, IRIS Forms continuously validates the content and flags errors to save you time and trouble.

Ensure full compliance with major message formats

As IRIS Forms supports the complete message catalogue of MTF and VMF, it is a perfect fit in a highly interoperable environment and across domains.

Ensure consistent and correct data

By producing information in IRIS Forms, you ensure that everyone receives the right information at the right time.

Experience easy-to-use data entry forms

IRIS Forms comes with a reader-friendly interface that only displays the fields and sections that need to be filled in, guiding users to comply with standards.

IRIS Forms – managing the communication flow

IRIS Forms is a world-leading, commercial off-the-shelf (COTS) product used by many nations in their command-and-control and military message handling systems for working with formatted messages.

Ensure mission success

The transmission of accurate and valid military information, such as orders, reports, and messages, is imperative for succeeding in any area of operations. With IRIS Forms, you can simplify the exchange of mission-critical information across domains with formatted military messaging, ensuring interoperability and mission success.

Optimise personnel allocation

IRIS Forms is easy to deploy, either in a desktop Windows application or web browser, and easy to use. This minimises the cost of user training and also implementation requirements for managers.

With automated forms generation and validation, IRIS Forms allows you to save time and manpower compared to traditional military messaging systems. The low training requirements combined with IRIS Forms' automation capabilities optimises personnel allocation and allows your users to focus on more demanding tasks.

Enhance allied interoperability

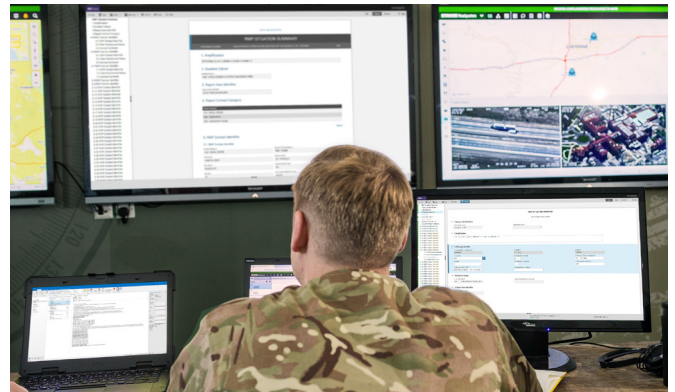

IRIS Forms offers full compliance with the complete message catalogue from NATO APP-11 as well as USMTF, OTH-T GOLD, ASMTF, and national messages adhering to ADatP-3, supporting messages in traditional slash-delimited and XML-MTF formats. IRIS Forms also provides full message catalogue support for binary MIL-STD-6017, A+, B, C, and STANAG- 5519.

This makes IRIS Forms a perfect fit in a highly interoperable environment for orders, reports, requests, and situational awareness information on multiple tactical levels across domains and coalitions. By standardising message designs, IRIS Forms facilitates coalition and allied interoperability.

Powerful military messaging and interoperability off-the-shelf

IRIS Forms seamlessly integrates with the other solutions from the IRIS suite. The IRIS suite covers all aspects of military messaging – from management and maintenance of standards to production and distribution of military messages.
