

# SYSTEMATIC COLUMNA

Cura

*Simplifying critical decision making*

## A citizen record for the care and health sectors

The citizen record contains and facilitates:

- One collective citizen record – across specialities and organisational structures in municipalities
- Support in all initiatives concerning home care, rehabilitation, health treatment, and prevention activities
- “The good colleague” that supports health and care professionals in treating citizens via decision support
- Insight for citizens, greater flexibility, and increase in the individual’s own mastering of treatment
- Mobile design to support employees on the go
- Transparency through knowledge sharing about citizens, across sectors and specialities
- Easily understandable and userfriendly interfaces, reducing time spent documenting and freeing up time for care and health treatment of citizens
- A strong foundation in the shape of a standardised, tested, and open health platform
- Support and inclusion of innovation, benefitting both citizens and health professionals

Columna Cura supports employees in their daily tasks of providing citizens with targeted care and guidance about preventive actions, health, and rehabilitation

**SYSTEMATIC**

# Columna Cura provides coherence and overview

– for all care and health professionals in municipalities, with citizens in focus

As the number of elderlies increases along with the amount of complicated procedures, there is an increasing need for individualized treatment plans and services that are efficient and tailored for the individual citizen.

With one collective citizen record for the individual citizen, manual processes can be made more efficient and information can be shared across sectors, specialties, and health professionals. With Columna Cura, employees get a good colleague that contributes to strengthened coordination and communication in an intelligent way. In the daily work, it provides its users with support as well as a good foundation for making the right decisions.

By having the relevant information at hand, employees are better able to provide citizens who need help, training, support, and rehabilitation with targeted and appropriate guidance.

Citizens will be able to monitor the process of their own treatment plan. Moreover, the citizen can take part in scheduling when the home care provider should visit.

Columna Cura is a unique platform that supports all involved parties, from citizens to health professionals.

The core idea with Columna Cura is to provide employees in the home care sectors with the opportunity to spend more time on care, health, and prevention. Through intelligent user interfaces, only information relevant to the individual user and citizen is shown, while the level of quality is kept high and documentation is made easier.

Taking its departure in a functional and innovative mindset, Columna Cura is designed to support the mobile user as well as ensure easily understandable adapted user interfaces. This is secured through application views designed with a

The solution provides users with a coherent experience and active decision support by making use of knowledge concerning connections, guidelines, and recommendations

minimalistic, clear and simple mindset. By providing the various employee specialties with different application views, a foundation for supporting situation specific work tasks is created along with relevant documentation options.

Usage of mobile devices is a priority with Columna Cura as using the system mainly takes place on the go and where citizens are: in their homes. Care and health professionals need to be able to access and document information at various times and various places which is why Columna Cura is also a mobile solution functioning on tablets and smartphones as well as computers.

Columna Cura is built on the tested and standardised e-health platform Columna, which already contains a line of health modules, integrations, and services. Columna is well tested and is used on a daily basis by more than 20,000 healthcare professionals. In the municipalities of Aarhus and Copenhagen, Columna Cura will have more than 15,000 daily users.
