Patient Logistics

Benefits

- Better service for patient and visitors
- Optimised patient flow
- Less stress because of fewer interruptions
- Greater patient satisfaction
- Less stress for patients
- Greater efficiency leads to economic savings

Automation of patient logistics offers savings and better service for patients and visitors

Optimising patient flow by patient empowerment

Complete solution

The optimisation of patient logistics has come into particular focus with larger and more complex hospital buildings. The aim is to make it **easy for patients** and their relatives to get to their destination.

Systematic has a **comprehensive solution** for this – Columna Patient Logistics. This contains a range of different modules aimed at helping patients and their relatives get directions.

Intelligent, digital directions, featuring different types of signs, views and **interaction opportunities**, make it easier for patients to get to where they need to be.

Columna Patient Logistics modules address the entire patient flow – right from home to the correct department at the hospital, and then back.

The big advantage of these solutions is that all directions are updated from one central point, so that every module is always fully up to date.

Patients – and their families and relatives – experience **better service**, while staff resources are freed up for other tasks. At last there is a tool that makes it safer and easier for patients to be self-reliant during a hospital visit.

Modules

WAYFINDING

- Personal and confident guidance
- Work through Web maps, a Patient app and interactive information stands
- Guides patients and visitors to their desired destination

DIGITAL SIGNAGE

- Central and automated update of info
- Scaling from department to region
- Supports the static signage
